Agriculture

MOBILITY PATTERNS

Mersin Metropolitan Municipality is working to support sustainable transport. It has added CNG (compressed natural gas) buses, which are better for the environment and cheaper to use. The city has also started projects for a light rail system to improve public transport. In addition, bicycle transport is being supported, and more bike lanes are planned across the city. These actions aim to make Mersin a cleaner, greener, and more comfortable place to live and travel.

INTERNATIONAL PARTNERS

NATIONAL GOVERNMENT

The city wants to reduce greenhouse gas emissions, support the use of renewable energy, increase green areas, and improve waste management. The municipality has prepared a Sustainable Energy and Climate Action Plan (SECAP). This plan helps Mersin become more resistant to climate change. It includes a list of greenhouse gas emissions and strategies to adapt to climate change.

With the European Union projects it is managing, Mersin Metropolitan Municipality is also working to understand climate risks in urban, coastal, and rural areas. The city is taking action to protect the environment and develop climate adaptation plans.

Mersin is also working to support eco-friendly transport. The city has added electric buses to its public transportation system and started new projects to build more bicycle lanes. To fight sea pollution, the municipality is doing sea inspections and surface cleaning. All these efforts help Mersin become a greener, more livable, and climate-resilient city, and they support the city's local and international sustainability goals.

Mersin is strengthening its commitment to environmental sustainability through efforts to reduce plastic pollution along its coastline and enhance international cooperation on climate action. The city is also promoting cleaner transportation with the integration of electric buses, aiming to cut emissions and improve air quality. These initiatives support Mersin's broader goals of protecting natural resources and building climate resilience.
